1. Introduction to DownloadTool

1.1. User Interface

The main interface of the DownloadTool developed by Espressif is shown in Figure 1-1. You can configure how to download in this interface. See Chapter 3 for more details.

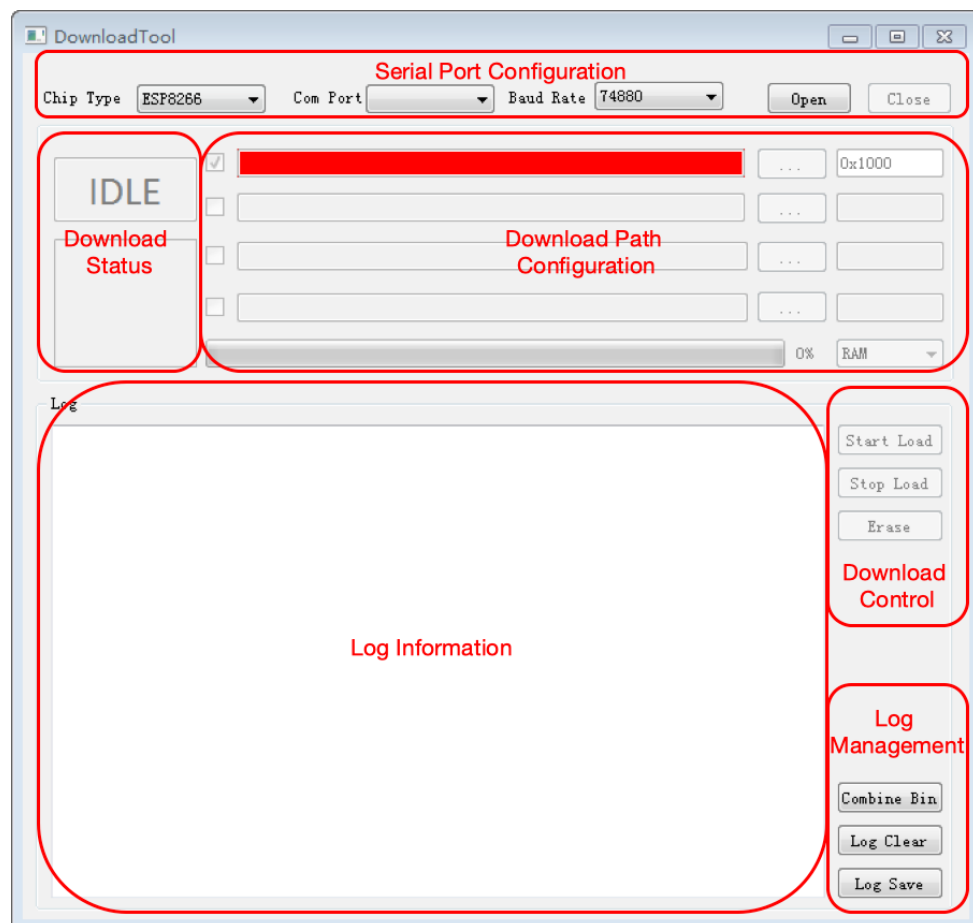

Figure 1-1. DownloadTool Main Interface

1.2. Function Overview

The DownloadTool interface consists of six parts: Serial Port Configuration, Download Path Configuration, Download Status, Download Control, Log Information, and Log Management.

Table 1-1. DownloadTool Function Overview

| Function | Description |
|-----------------------------|---|
| Serial Port Configuration | The configuration options include chip type, COM port, baud rate, and the status of the serial port. |
| Download Path Configuration | Select the firmware that needs to be downloaded and enter the download address in hexadecimal format. |
| Download Status | There are four download statuses: "SYNC", "LOAD", "SUCC", and "FAIL". |
| Download Control | Download Control options include "Start Load", "Stop Load", and "Erase". |
| Log Information | All log information is printed in this area. |
| Log Management | You can save or clear the log output. |

2. Download Mode

2.1. Hardware Setup

Connect your device to a serial converter. Make it enter the download mode. Refer to Table 2-1 for more information about how to set up and configure hardware.

Table 2-1. Hardware Setup and Configuration

| Chip | Description |
|-------------------------|--|
| ESP8266/ESP8285 | <ul style="list-style-type: none">• Connect 3V3/CH_EN pins to the 3.3 V power supply• Connect RXD/TXD/GND pins to corresponding pins of a serial converter so that PC can communicate with DUT• Pull MTDO (GPIO15) low• Pull GPIO0 low to make DUT enter the downloading mode |
| ESP32/ESP32-S2/ESP32-S3 | <ul style="list-style-type: none">• Connect 3V3/CH_EN pins to the 3.3 V power supply• Connect RXD/TXD/GND pins to corresponding pins of a serial converter so that PC can communicate with DUT• Pull GPIO0 low to make DUT enter the downloading mode |
| ESP32-C3 | <ul style="list-style-type: none">• Connect 3V3/CH_EN pins to the 3.3 V power supply• Connect RXD/TXD/GND pins to corresponding pins of a serial converter so that PC can communicate with DUT• Pull GPIO9 low and GPIO8 high to make DUT enter the downloading mode |

2.2. Log Output

You can check whether the DUT has entered the download mode based on log output. Open a serial port tool and the corresponding serial port. Connect the DUT to the serial converter following the instructions in Table 2-1. Power up the DUT and some log output will be printed in the serial tool. Compare it with the corresponding log output in Table 2-2. If they are consistent, the device is in the download mode.

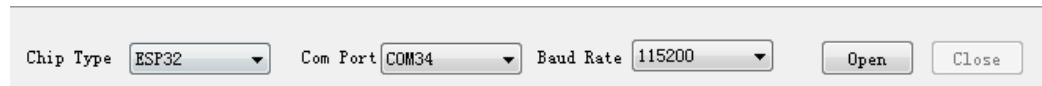

Table 2-2. Log Output for the Download Mode

| Chip | Baud Rate | Log Output |
|----------|-----------|---|
| ESP8266 | 74880 | ets Jan 8 2013,rst cause:1, boot mode@1,0) |
| ESP8285 | 74880 | ets Jan 8 2013,rst cause:1, boot mode@1,2) |
| ESP32 | 115200 | rst:0x1(POWERON_RESET),boot:0x3(DOWNLOAD_BOOT(UART0/U ART1/SDIO_REI_REO_V2)) waiting for download |
| ESP32-S2 | 115200 | rst:0x1 (POWERON),boot:0x0 (DOWNLOAD(USB/UART0/1/SPI)) waiting for download |
| ESP32-C3 | 115200 | rst:0x1 (POWERON),boot:0x4 (DOWNLOAD(USB/UART0/1)) waiting for download |
| ESP32-S3 | 115200 | rst:0x1 (POWERON),boot:0x0 (DOWNLOAD(USB/UART0/1/SPI)) waiting for download |

3. Download Instructions

3.1. Serial Port Configuration

A screenshot of the 'Serial Port Configuration' window. It features three dropdown menus: 'Chip Type' set to 'ESP32', 'Com Port' set to 'COM34', and 'Baud Rate' set to '115200'. To the right of these menus are two buttons: 'Open' and 'Close'.

- **Chip Type:** Select the corresponding chip.
- **Com Port:** Select the corresponding serial port.
- **Baud Rate:** Baud Rate. The default is 115200.
- **Open:** Open the serial port.
- **Close:** Close the serial port.

3.2. Download Path Configuration

A screenshot of the 'Download Path Configuration' window. On the left, there is a yellow box with the text 'SUCC' and a MAC address '50:02:91:a5:94:00'. The main area contains a table with three rows. The first row is checked and shows a file path 'D:/Auto_Test_Tool/bin/ESP32/ESP32_RFTTest_179_20201222.bin' and a hex address '0x1000'. The other two rows are unchecked and have empty fields. At the bottom, there is a green progress bar at 100% and a 'Flash' button.

- Download to “**RAM**” or “**Flash**”:
Click the “**RAM**” button to choose where to download firmware, either “**RAM**” or “**Flash**”. The two are different. If the bin file is downloaded to **Flash**, you need to download it only once. To run the downloaded file, you need to switch to Flash operation mode by floating GPIO0 and re-powering the DUT. If the bin file is downloaded to **RAM**, it will run immediately after the download process is completed. But the **RAM** program will be erased as soon as you reboot the DUT. You will have to download the bin file again.
- Select which firmware to download:
Click “...” to select from PC which firmware to download and check the box on the left to download it. **Unchecked firmware will not be downloaded.**
- Enter the download address:
Enter the download address (hexadecimal format) in the blank box on the right if the firmware is downloaded to **Flash**. If it is downloaded to **RAM**, you cannot, and do not need to do it. Table 3-1 lists the addresses where RF firmware of each chip should be downloaded.

Table 3-1. Download Address for ESP Chips

| Chip | Download Address |
|-----------------------------------|------------------|
| ESP32/ESP32-S2 | 0x1000 |
| ESP8266/ESP8285/ESP32-C3/ESP32-S3 | 0x0 |

3.3. Download Status

- **SYNC:** The firmware is in sync.
- **Load:** The firmware is being downloaded.
- **SUCC:** The firmware has been downloaded successfully.
- **Fail:** The download failed.

3.4. Download Firmware

- **Start Load:**
Click the **Start Load** button to start the downloading process. When the green process bar shows 100%, and the status field displays the word “**SUCC**”, the download is successful.
- **Stop Load:**
Stop downloading.
- **Erase:**
Erase the firmware in flash.

3.5. Log Output

After the download process is completed, float GPIO0 and re-power the DUT, and let it enter the normal working mode. Now you can start testing. You can use a serial tool to check whether the firmware is burned successfully. Figure 3-1 shows the log output of an ESP32 product after RF test firmware is downloaded into it.

4. FAQ

4.1. Serial Port Issues

Q: I can't find the corresponding serial port in the “Com Port” drop-down list after I open the tool.

A: Please open the device manager to check whether the serial port has been installed successfully. If not, check if there is anything wrong with the driver.

Q: I can't open the serial port.

A: Please check whether the port is occupied by “EspRFTestTool”. First exit the “DownloadTool” interface, go back to the “EspRFTestTool” interface, and close the port. Then, try it again. Or, it may be occupied by other threads.

4.2. Download Issues

Q: The DUT cannot enter the download mode.

A: Check whether hardware is set up correctly according to Section 2.1. If your device is a complete machine, please check whether TXD/RXD is occupied by other masters on your device.

Q: The interface suggests that the download is successful but the test still does not go smoothly.

A: Check whether “Chip Type” is consistent with the chip of your device. In addition, two RF test firmwares are developed for ESP8266 and ESP8285. One supports the 26 M crystal oscillator, the other 40 M crystal oscillator. Please distinguish the two.
